

Student Portal — Setup Guide

Ye website kya karti hai

- **Students** apna diya gaya email + password se login karke sirf itna dekh paate hain: **naam, admission date, total fee, paid fee, aur due fee.**
- Koi bhi student khud register nahi kar sakta — sirf **aap (admin)** unka login banate ho.
- **Aap (admin)** apne alag login se admin panel mein jaake naye students add karte ho aur unki fee payment update karte ho.
- Har student sirf **apna khud ka** data dekh sakta hai, doosre kisi student ka nahi (Firestore Security Rules se protected hai).

Files: `index.html` (student login/dashboard), `admin.html` (aapka admin panel), `style.css`, `app-student.js`, `app-admin.js`, `firebase-config.js`, `firestore.rules`.

Kyun Firebase? GitHub Pages sirf HTML/CSS/JS free mein host karta hai — server ya database nahi. Real login + database ke liye ek chhota backend chahiye hi hota hai. Firebase (Google ka tool) free hai, credit card nahi chahiye, aur exactly ye kaam karta hai.

Kya chahiye

1. Google account (Firebase free ke liye)
 2. GitHub account (website free host karne ke liye)
-

Step 1 — Firebase Project Banao

1. <https://console.firebase.google.com> par jaakar login karein
2. **"Add project"** click karein, koi bhi naam do (jaise `MyTuitionPortal`), **Continue**
3. Google Analytics ka toggle off kar sakte ho (zaroori nahi), **Create project**

Step 2 — Login (Authentication) Enable Karo

1. Left sidebar → **Build** → **Authentication** → **Get started**
2. **Sign-in method** tab → **Email/Password** select karein → **Enable** → **Save**

Step 3 — Database (Firestore) Banao

1. Left sidebar → **Build** → **Firestore Database** → **Create database**
2. Location: **asia-south1 (Mumbai)** choose karein (India ke liye sabse fast)
3. **Start in production mode** select karein → **Create**

Step 4 — Website ko Firebase se Jodo

1. Project ke Overview page par `</>` (Web) icon click karein
2. App ka koi bhi nickname do → **Register app**
3. Jo `firebaseConfig = {...}` code dikhta hai, use copy karein
4. `firebase-config.js` file kholein, `"YOUR_API_KEY"` waale saare placeholders apne actual values se replace karein

Ye config public dikhna bilkul normal/safe hai — asli security agle step ke Rules se aati hai, is config ko chhupane se nahi.

Step 5 — Security Rules Lagao (Bahut Zaroori — Isse Data Safe Rehta Hai)

1. Firestore Database → **Rules** tab
2. `firestore.rules` file ka poora content copy karke, jo already wahan likha hai use **replace** kar dein
3. **Publish** click karein

Step 6 — Apna Admin Account Banao

1. Authentication → **Users** tab → **Add user**
2. Apna email + password daalein (ye aapka **admin login** hoga — students wale se alag)
3. User ban jaane ke baad, list mein uske saamne jo lamba **User UID** dikhta hai, use copy kar lein

Step 7 — Khud Ko “Admin” Mark Karo

1. Firestore Database → **Data** tab → **Start collection**
2. Collection ID: `admins`
3. Document ID box mein **apna copied UID** paste karein (auto-generate mat karein)
4. Ek field add karein — Field: `role` , Value: `admin` (ya koi bhi value) → **Save**

Step 8 — GitHub Par Repository Banao Aur Files Upload Karo

1. <https://github.com> par login karke **New repository** banayein — naam jo bhi chahen (jaise `student-portal`), **Public** rakhein (*free GitHub Pages sirf public repo mein chalta hai — pehle hi bata dena chahta hoon, fikar mat karein, config public hona safe hai, ye Step 4 mein samjha diya hai*)
2. Repo khulne par **“uploading an existing file”** link (ya **Add file → Upload files**) click karein
3. Ye saari 7 files (`index.html` , `admin.html` , `style.css` , `app-student.js` , `app-admin.js` , `firebase-config.js` , `firestore.rules`) ek saath drag-drop karein
4. Neeche **Commit changes** click karein

Step 9 — GitHub Pages On Karo (Free Hosting)

1. Repo ke **Settings** tab → left sidebar mein **Pages**
2. **Source** mein **Deploy from a branch** → Branch: **main**, folder: **/ (root)** → **Save**
3. 1–2 minute mein site live ho jayegi, is URL par: `https://aapka-username.github.io/student-portal/`

Step 10 — Students Add Karna Shuru Karo

1. `https://aapka-username.github.io/student-portal/admin.html` par jaayein
2. Step 6 waale apne admin email/password se login karein
3. **Add Student** form bharein: naam, admission date, total fee, ab tak paid fee, aur student ke liye ek login email + password
4. **Login email real hona zaroori nahi** — kuch bhi likh sakte ho jaise `rahul123@apnaschool.com` , bas usmein `@` aur ek `.` hona chahiye

5. Student ko sirf itna de dein: **login email + password**

Students `https://aapka-username.github.io/student-portal/` (bina `admin.html` ke, seedha root URL) par jaakar login karenge, aur sirf apna naam/admission date/paid/due dekh payenge.

Aage Fee Update Karni Ho To

Admin panel ke **Students** table mein har student ke row mein "New paid" box hai — nayi total paid amount daal kar **Save** karein, due amount apne aap recalculate ho jayega.

Agar Koi Student Chala Jaaye

Table mein **Remove** button unka fee-record hata deta hai. Unka login (Authentication) alag se active rehta hai — use bhi hatane ke liye Firebase Console → Authentication mein jaakar us user ko manually delete karein.

Kitna Free Hai (Aug 2026 tak)

- **Firestore:** roz 50,000 reads + 20,000 writes free — ek chhote institute ke liye ye bahut zyada hai
- **Authentication:** email/password login **50,000 users tak free**
- **GitHub Pages:** public repo ke liye hamesha free

Jab tak aap khud paid (Blaze) plan par upgrade na karein, koi bill nahi aayega.

Customize Karna Ho To

- **Institute ka naam:** `index.html` aur `admin.html` mein "Student Portal" text dhundh kar apna naam likh dein
- **Colors:** `style.css` ke top par `:root { ... }` mein diye gaye color codes badal dein

Kuch Kaam Nahi Kar Raha To

- **"Permission denied" / students list nahi dikh rahi:** Step 6–7 dobara check karein — aapka UID `admins` collection mein sahi se add hua ya nahi
- **Login "invalid email" bata raha:** Email format check karein — `@` aur `.` hona chahiye

- **Site 404 dikha rahi:** Settings → Pages mein status check karein, 1–2 minute wait karein
